PRODUCT REFERENCE MEMO

164-06100 SLOTTED BRAKE DISC ASSEMBLY (FIELD REPLACEMENT)

Thermal relief slots have been incorporated into the 164-06100 Brake Disc Assembly. These slots minimize tension stresses at the O.D. of the disc, thereby relieving the welded joint between the cup and flange. Dynamometer testing had proven the addition of these slots invaluable with respect to completely eliminating weld cracks.

Enclosed for your files and/or aircraft maintenance records is a copy of the minor change acknowledgment from our F.A.A.-EMDO, Des Plaines, Illinois. Beech Aircraft is aware of the slotted disc configuration and will be phasing this product improvement into O.E.M. wheel assemblies very shortly.

If convenient, a short note or telephone call from time to time updating the progress (hours/landings, etc.) would be greatly appreciated.
